PRODUCT GUIDE

PREMIUM STANDARD POTTING MIX

~ Red Tick ~

Introduction

- This Premium Standard mix is ideal for all container plants in both indoor and outdoor situations.
- Contains slow release fertiliser, providing sufficient nutrients for a month of plant growth.
- Easy to re-wet because it is blended with wetting agent for quick and even water penetration.

Available in 5, 15 and 30L sizes.

Standards

Brunnings Premium Potting Mix is a superior quality organic mix that complies with the requirements of Australian Standard AS 3743 for premium potting mixes.

For Best Results

When should I re-pot my plants?

Most plants require re-potting at regular intervals, into larger pots/containers. A good indication that you plant needs re-potting is when its roots are coming through the drainage holes. The ideal time for re-potting is Spring, Summer or early Autumn.

How do I re-pot for best results?

Water the plant in its old pot and allow the plant to drain. Select a pot that is 25-50mm wider than the old pot. Cover drainage holes with stones or pebbles and partly fill with potting mix. Loosen plant's root system. Position plant in centre of new pot. Fill around the edges of the root ball with potting mix to within

20mm of the top of the pot and firm down gently.

Thoroughly water re-potted plants, ensure the potting mixture is uniformly moist and allow to drain. Thereafter water whenever the surface of the potting mixture feels dry to touch. Brunnings Premium Potting Mix contains a wetting agent for quick and even water penetration.

This mix contains sufficient nutrients for about a month of plant growth. We recommend using Nitrophoska Slow Release fertiliser after that.

Friendly Hints

Plants already in their maximum required pot will benefit from annual top-dressing. To do this, remove and replace the top 25cm of potting mix.
