PRODUCT GUIDE

SEED RAISING MIX

Introduction

- Selected blend of composted materials to ensure reliable seed germination and rooting of cuttings.
- Promotes quick and healthy growth of all seeds.
- Ideal for propagation of a wide range of plants such as:-

Vegetables, Bedding Plants, Flowers and Pot Plants.

Available in 5 litre size.

For Best Results

Sowing seeds in Container:

Ensure your pots have drainage holes, and slightly over fill pot with Seed Raising Mix without firming it down at all. Scrape off surplus, level with the top of the container and lightly firm down.

Water thoroughly and allow to drain. Sow the seeds thinly and evenly. (Large seeds should be sewn in rows). Cover with some mix. (Very fine seeds should not be covered). Place clear polythene or a sheet of glass over the top and maintain correct temperature for germination. Uncover when seeds begin to germinate and keep seedlings in good light, but shaded from direct sunlight. Water when surface feels touch dry.

Outdoor Seed Sowing:

Make shallow furrows in the soil. Place 2cm of Seed Raising Mix in the furrows and water. Sow seed as directed. Cover with Seed Raising Mix and firm down gently. Water sparingly and often until germination occurs.

Cuttings:

Fill containers in the same way as for sowing seeds. Prepare the cutting in the normal way and make holes in the mix with the end of a pencil, push cuttings in, firm gently and water them in.

Friendly Hint

Seeds need warm, moist conditions to germinate. Once they have germinated they require good natural light, water and nutrients. Use a suitable seedling starter fertiliser.
