

BRUNNINGS GARDEN PRODUCTS
PRODUCT GUIDE

DOLOMITE

Introduction

- Brunnings Dolomite corrects soil acidity and ..
- Provides 2 essential plant nutrients - calcium and magnesium.
- Dolomite improves the structure of hard, cloddy soils making the soil more friable and allowing greater penetration of air and moisture.
- Dolomite also hastens the decomposition of raw organic material.

Available in 5 and 10kg size.

Application Rate

Vegetables and annuals

Apply 125-250 grams per square metre.
Apply 6 weeks before planting seeds and work well into the soil.

Lawns

Apply 125-250 grams per square metre in spring or summer. Lawns require a pH of 6 to 6.5. Acidity should be correct prior to sowing. Thereafter check pH each year and adjust with Dolomite as required.

Fruit Trees

Apply 250 grams per square metre around the tree.

Other Plants and Shrubs

Apply 60-125 grams per square metre in spring or summer. Before adding Dolomite to the garden beds check the pH requirements of the plants. Do not apply near acid loving plants such as azaleas, camellias, rhododendrons, daphne, magnolias, tibouchinas, gardenias and certain Australian natives.

Active Ingredients & Analysis

14% Calcium as Calcium Carbonate 8% Magnesium as Magnesium Carbonate
