

BRUNNINGS GARDEN PRODUCTS PRODUCT GUIDE

EASY WETTA POTTING MIX

Introduction

- A rich blend of composted organic materials.
- Contains soil wetting granules for improved water-holding capacity.
- Easy to re-wet as the soil wetting granules assist in quick and even water penetration.
- Ideal for containers, plants indoor and outdoor, hanging baskets, potting bulbs and re-potting of indoor and outdoor plants, shrubs and ornamentals.

EASY WETTA SOIL WETTING GRANULES HAVE BEEN ADDED TO IMPROVE SOIL STRUCTURE AND ENABLE THE SOIL TO HOLD WATER AND NUTRIENTS LONGER.

Available in 25L size.

When to re-pot?

Most plants require re-potting into larger containers at regular intervals, usually once a year until they reach a stable size. When the roots are coming out through drainage holes it is a good indication that it needs re-potting.

For Best Results

Water the plant in its old pot and allow to drain. Select clean pot 25mm-50mm wider than old pot. Cover drainage holes with stones and partly fill with potting mix. Carefully knock plant out of old pot and if necessary loosen root system.

Position plant in centre of new pot. Fill around the edges to the root ball with potting mix to within 20mm of the top of pot and firm down gently.

Watering

After re-potting or top dressing, plants require a thorough watering.

Fertilising

Plants need regular feeding to sustain vigorous growth and to promote strong root development.
